BLUE JAY

Introduction

The Blue Jay sometimes in the winter steal eggs or young from other nest. This bird is very smart and both the female and the male are the same color. The purpose of this is to give you information about the Blue Jay.

www.focusonnature.com

Young

The Blue Jay lays three to six eggs. The eggs are either blue, green, or yellow. Blue Jay eggs also have spots either brown or gray. These creative birds hatch in about 17 to 18 days. When the female or the mother is sitting on her eggs the male or father of the eggs feeds her, but when the little birds hatch the mother or the female feeds the young.

Habit and Food

The Blue Jay lives on the eastern half of the US and Canada. This bird does not migrate. The types of food the Blue Jay eats are nuts, smaller seeds, harmful insects, tree shrubs and many more!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Description

The Blue Jay is very colorful, the colors that the Blue Jay is blue and white plumage and created head, and the chin is light gray. The size of a full grown Blue Jay is almost one foot (30cm) in length including its long tail!!!!!!!!!!!!!!!!!!!!!!!!!!!!
