# SNOWY OWL

## Introduction

Have you ever seen a bird that fights wolves? Snowy owls are the heaviest, most powerful birds in all of North America and they protect their nests against predators, even wolves! The purpose of this essay is to teach you about a Snowy Owl.

## Description

The Snowy Owl is an almost a totally white bird, but has brown specks on its body. This bird is about a range from 20-28 inches.

## Habitat and Food

You could find the Snowy Owl in the arctic tundra. This arctic bird does not migrate because it lives in a place that is cold all year round. The Snowy Owl eats lemmings, rabbits, waterfowl, and fish.

## Young

The Snowy Owl lays 3-11 eggs. The female owl sits on eggs for about 31-33 days. After the eggs are hatched the female covers the baby birds for 2-3 weeks.

## Conclusion

The Snowy Owl is a strong bird that will do almost anything to protect their young and eats a lot of food. One thing I learned about the Snowy Owl is that it is a strong bird. Now that you've learned about the Snowy Owl you can go tell your friends about this wonderful bird!
