Scarlet Macaw Parrot

Intro

Have you ever wondered what it would feel like to be repeated by a colorful bird? Parrots have big heads and short necks, they also have two toes in front and two in the back. They are endangered Parrots. The purpose

Habitat and food

They live in a range from Mexico to Bolivia. They don't migrate because they live through out Mexico and Bolivia. They usually eat fruits ,nuts, seeds, and buds.

Description

Their colors are red, blue, green, and yellow. Their size ranges from 8 centimeters to 3 feet. Macaw Parrots are the largest parrots in the world. They are also an en-

Young

There eggs are round and white and are usually buried in holes. They are born in captivity because they are endangered. Parents (if they lay eggs in the wild) have to burry the eggs in a hole. Parents are responsible for food and a nest.

Conclusion

In conclusion Parrots are known for there colorful body's and that they can talk. They're endangered parrots. Not all parrots can talk but the Scarlet Macaw Parrot can which makes it one of the only talking birds in the world.
