

# Scarlet Tanager

Hope M.

Feb.22  
2008

## Introduction

Did you know that the Scarlet Tanager is mostly red with a little bit of black? Tanagers join mixed species of flocks with flycatchers, antbirds, and wood creepers. The purpose of this document is to discuss the behaviors and lifestyles of the Scarlet Tanager.

## Young

The eggs are white with brown spots. They are really cute! How long does it take for them to hatch? The chick is born 9-11 days.

## Conclusion

The one thing that I learned is that the Scarlet Tanager has many species like the Summer Tanager. I learned a lot about the bird and I did not know anything about this bird or the other species. They are very interesting birds I think you will like them!

## Habitat and Food

For the home they use grass with twigs they have a certain way they line up the grass and twigs.
