Clip-art

The snowy owl has many relatives like the Barred Owl.

The Snowy Owl

birdweb.org

#1 female

#2 male

Young

When the lemming population is high the Snowy owls will breed their kind. They lay 6-12 eggs a season; They their eggs at the end of winter. the eggs of a Snowy Owl are as thick and warm as a wrist band. The eggs of a Snowy owl will normally hatch in 31-35 days, or else it is a dud. (A dud is an egg that doesn't hatch) . Both of the owls sit on the eggs. They feed their babies lemmings and almost anything else.

Description

The Snowy owl is all white#2 . The female Snowy owl will get black spots #1. The snowy owl is not the tallest but the heaviest.

Introduction

Have you ever gone to the North Pole and seen a bird or have you ever heard a noise of an bird? Well you saw a n owl and most likely a SNOWY OWL! Did you know that the Snowy Owl is so powerful that It can take down a artic hair. (that is two times its size.); It can also snatch a duck right out of a pond. The purpose of this Information is to inform you about a very rare bird.

Habitat and food

The Snowy owl is a bird that will go to locations as Candia, North Pole, and South Pole .The Snowy owl is a migrant bird, at the end of spring .The snowy owl feeds on lemmings, gulls, ducks, and artic hares.

Conclusion

Finally The Snowy Owl is a semi-rare bird, although it is a beautiful bird. I have told you about Habitat and food, it's young, and description .One thing I learned is That a Snowy Owl will kill a wolf or even a human to protect it and its young.
